

AGI THEMATIC RESEARCH · INDIA · TECHNOLOGY INFRASTRUCTURE

India's AI build-out, as the filings show it

Fifteen listed companies pass AGI's materiality test for AI and data-centre business: thirteen on figures they disclose, two on AGI's FY29 estimate. The market has noticed: the median price asks for 47% profit growth a year to FY29.

29	15	+33%	47%
companies admitted on their own filings, of 50 read	pass the materiality test (13 on disclosed figures); ₹23.1 lakh cr of market value	median revenue growth, June quarter, the 15	median profit growth a year the price needs to FY29

KEY TAKEAWAYS

- AI is already in the filings.** Of 50 listed companies read, 29 have AI or data-centre orders, capex or operating disclosures on their own paper, and 15 pass a materiality test (₹100 cr of revenue or orders, 5% of revenue, named-customer capacity, or FY29 AI/DC EBITDA of 5% of FY26 EBITDA on AGI's estimate). Thirteen pass on disclosed figures; MTAR and Craftsman on the estimate alone.
- The material names are the smaller ones.** The three largest companies in the universe (Reliance, Bharti Airtel, L&T) are 58% of its ₹58.3 lakh cr market value, but AI is about 2% of EBITDA by FY29 for Bharti and 1% for L&T in AGI's base case, and Reliance does not disclose its contribution.
- Growth is real and priced.** Median June-quarter revenue growth across the 15 is +33%; the median price needs profit growth of 47% a year to reach 30x earnings by FY29, and 8 of 15 need more than 40%.
- Growth is being funded.** 7 of the 15 had negative free cash flow in FY26. On AGI's filing-derived return-on-capital screen, only 4 combine a return above 20% with positive cash flow: Netweb Technologies, Cummins India, Schneider Electric Infrastructure, ABB India.
- The disclosure gap is the one to watch.** Hitachi Energy, GE Vernova and Polycab have filed data-centre evidence but no disclosed value; CG Power has semiconductor revenue, but its AI/data-centre materiality is not established.

ABOUT THIS REPORT

Every company figure is from the company's own filing, results, presentation or call, read by AGI. Market values are AGI's arithmetic: last close on 18 September 2026 times shares from the latest exchange shareholding filing. No broker or consensus estimate is used anywhere.

Figures marked ^A are AGI estimates: scenario arithmetic with every assumption stated in the India AI Monitor.

STATUS

Research note. For information only. See methodology and disclosures on the final page.

Live data:

agarwalglobalinvestments.com/strategy

Where the AI build-out shows up

India's AI infrastructure story is usually told through the largest names: conglomerates announcing gigawatt campuses and hyperscaler partnerships. The filings tell a narrower and more useful story. This report follows Indian-listed suppliers into both domestic and global AI and data-centre build-outs. When AGI read 50 listed companies for evidence on their own paper, 29 qualified: each has a filed data-centre order, committed capex or an operating disclosure. Only 15 pass AGI's materiality test: 13 on disclosed figures, and two, MTAR and Craftsman, on AGI's FY29 estimate. Seven other admitted members are tracked in the India AI Monitor but not covered in this note.

The companies with the highest AI and data-centre materiality are mostly mid-sized. Netweb, STL, Blue Star, CleanMax, HFCL, Anant Raj, ABB and MTAR each have AI or data-centre business that, on AGI's base case, could equal a quarter or more of FY26 EBITDA by FY29.

For the largest companies the business is real but small: about 2% for Bharti Airtel's Nxtra and 1% for L&T's Vyoma. Reliance does not disclose its contribution.

The companies are delivering. Median revenue growth in the June quarter was +33% across the basket, led by Netweb (+172%), Diamond Power (+129%), MTAR (+130%) and HFCL (+120%).

So is the market. At the 18 September 2026 close the median basket member traded on 95x FY26 profit, and would need profit growth of about 47% a year for its price to equal 30x earnings by FY29. That is the central tension of the theme: growth that is visible in the filings, against prices that already assume a great deal of it.

Cash is the second constraint. 7 of the 15 had negative free cash flow in FY26, most sharply CleanMax, whose capex was three times its revenue. On AGI's filing-derived return-on-capital screen, the companies that combine AI exposure with returns above 20% and positive cash flow are few: Netweb Technologies, Cummins India, Schneider Electric Infrastructure, ABB India.

The watch list matters as much as the basket. Hitachi Energy, GE Vernova, Polycab, Reliance, Adani Enterprises, Tata Power and CG Power all have filed evidence of exposure, but none yet discloses enough to pass. A company joins the basket when it does: a disclosure event to watch each results season.

SIX STRUCTURES INSIDE THE BASKET

Direct AI earnings

Netweb Technologies · Sterlite Technologies · Blue Star · HFCL · Cummins India

AI and data-centre revenue is already measurable in the filings. The question is duration: whether today's awards and order books repeat.

AI factory and compute platform

Larsen & Toubro

L&T through Vyoma: an AI factory, colocation, GPU-as-a-Service and sovereign cloud. Large in rupees, small against L&T; the variable is how the Together AI order turns into revenue.

Data-centre owners

Bharti Airtel · Anant Raj

Commissioned, contracted and billed megawatts, utilisation and revenue per MW decide the economics. Nxtra is the largest disclosed platform; Anant Raj the most concentrated.

Electrical picks-and-shovels

ABB India · Schneider Electric Infrastructure · Diamond Power Infrastructure

Switchgear and cable orders are where data-centre capex lands first. Order share is disclosed; revenue share mostly is not.

AI electricity

CleanMax

Contracted DC-linked capacity, PPA economics and funding matter more than headline growth. CleanMax is the only name here whose data-centre exposure is quantified.

Components and semiconductors

Sansera Engineering · MTAR Technologies · Craftsman Automation

Real but small against each company: precision parts and engine components where order-to-revenue conversion is the watch point.

How the basket is built

Three tests, applied the same way to every company, so that membership is a rule rather than a view.

50

companies read

from AGI's own screen and relayed lead lists

29

admitted

each on a filed order, committed capex or operating disclosure

15

pass one of four tests: 13 on disclosed figures, 2 on AGI's estimate

7 + 2

7 members not yet material; 2 candidates not yet admitted

1 · Evidence

A filed data-centre order, committed capex or operating disclosure on the company's own paper. Announcements of intent, MoUs and addressable-market presentations do not count. Named completed supplies or recurring commercial relationships can establish exposure without a disclosed value; batched or prospective contractor orders need a split value.

2 · Materiality

Any one of: ₹100 cr or more of AI/data-centre revenue or executable orders; 5% or more of company revenue; AI/data-centre EBITDA by FY29 equal to 5% or more of FY26 EBITDA, in AGI's base case; or contracted capacity with a named customer equal to at least 5% of the company's total disclosed capacity, adjusted for ownership. The capacity route applies only where capacity represents the listed company's business: a joint venture inside a diversified parent must also pass on revenue, orders or FY29 EBITDA.

3 · Safeguards

Evidence confidence of medium or high, and a path from order or capacity to revenue within about 36 months: revenue already booked, a stated timeline, or an order book under 12 quarters of revenue.

TWO KINDS OF CONFIDENCE

Evidence confidence

Is the exposure real? High for two or more filed items or any order. Reliance's contracted 168 MW for Meta is high evidence.

Materiality confidence

How well is its size known? A company-stated figure is medium; an AGI-modelled figure is estimate-dependent; and no disclosed economic size is low (Reliance, Hitachi Energy, CG Power).

PROVENANCE

Figures are disclosed by the company, AGI arithmetic on disclosed figures (market value, ratios, lower bounds), or AGI estimates ^A (FY29 materiality and the growth a price needs, both at stated assumptions: a 30x exit multiple, a three-year horizon and model inputs in the India AI Monitor). Profit is FY26 profit attributable to owners; for Adani Enterprises it excludes the one-off gains on the Adani Wilmar stake sale and the Adani Cementation merger.

The basket: 15 economically material companies

Grouped by structure. Figures at the 18 September 2026 close; company figures as filed.

Continued overleaf.

Company	Layer	Market value	Revenue y/y latest qtr	FCF / sales FY26	P/E FY26	FY29 AI/DC EBITDA ÷ FY26 EBITDA ^A	Growth the price needs ^A	Status

Craftsman Automation CRAFTSMAN	Engine components	₹29,131 cr	+36%	−8%	76x	6%	36%	Emerging core AGI estimate

Market value and ratios are AGI arithmetic on filed figures. ^A AGI estimate at stated assumptions. The FY29 AI/DC EBITDA ratio is measured against FY26 EBITDA, so it can exceed 100%; it is blank where no base-case model runs (Schneider, Diamond Power): these pass on disclosed figures alone. ABB reports on a calendar year: its FCF/sales and P/E use CY2025. Status is basket classification, not a rating.

Materiality against expectations

How much AI could add to each company's earnings, against how much growth its price already needs. Filled navy: in the basket. Grey: watch list. Size: market value.

Source: AGI India AI Monitor; company filings; prices at the 18 September 2026 close. Both axes are AGI estimates ^A. Values beyond 100% on the horizontal axis sit at the edge, labelled with their value. Companies without a base-case model (Schneider, Diamond Power and most of the watch list) are not plotted. A position describes AGI's base case against the price; it is not a recommendation.

Top right is where the theme is most exposed and most priced. STL and Netweb could see AI and data-centre EBITDA exceed their entire FY26 EBITDA by FY29, but their prices need 193% and 63% profit growth a year. CleanMax sits close by, with the added burden of heavy capex.

The lower-hurdle names are where AI is a smaller share. L&T and Bharti Airtel need profit growth of 3% and 14% a year, because AI is a small part of large businesses priced on the rest. Anant Raj is the exception: material exposure (44% of EBITDA by FY29 in AGI's base case) and a price that needs 9% a year.

Growth delivered, growth priced

The latest quarter's revenue growth against the profit growth each price needs every year to FY29. The two are different measures; the gap between them shows how much of the future a price has already taken.

Source: company June-quarter results; AGI market value and FY26 profit to owners. Growth the price needs is AGI arithmetic at a 30x exit multiple over three years ^A.

Where delivery runs ahead of the price: Netweb, Diamond Power, MTAR, HFCL and CleanMax grew revenue faster in the June quarter than the profit growth their prices need. Their latest revenue growth exceeds the annual profit-growth hurdle implied by the price, though the two measures are not directly comparable: one quarter can reflect base effects, mix or timing.

Where the price runs ahead: STL, Schneider and ABB need profit growth well above their latest revenue growth. For STL the gap reflects a small FY26 profit base (₹56 cr from continuing operations) against a large award that has only begun to ship.

Company notes

What each company has disclosed, and what management says comes next.

Netweb Technologies NETWEB

AI COMPUTE · CORE

AI Systems revenue of ₹947.8 cr in FY26. In the June quarter AI Systems were 62% of revenue and grew 484% year on year. Order book ₹2,507 cr at 30 June.

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+172%	+7%	129x	63%/yr

Blue Star BLUESTARCO

DC COOLING / MEP · CORE

FY26 data-centre MEP revenue of about ₹1,000 cr, against an order book management put at about ₹1,500 cr at any given point (Q4 FY26 call). In Q1 FY27 it separately booked about ₹1,500 cr of new data-centre MEP orders.

Company target Data-centre MEP revenue about Rs 1,350-1,400 cr in FY27; about Rs 4,000 cr (close to 20% of revenue) by FY29

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+13%	-1%	60x	26%/yr

Cummins India CUMMINSIND

BACKUP POWER · CORE

Data centres were 30-35% of FY26 domestic power-generation revenue. Management cited about 40% in the June quarter; the denominator is not consistently specified in available disclosures.

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+18%	+12%	60x	26%/yr

Bharti Airtel BHARTIARTL

DC OPERATOR (NXTRA) · CORE

Nxtra earned Rs 2,434 cr of FY26 revenue at a 40.3% EBITDA margin and was valued at about \$3.1 bn in the March 2026 funding round. Airtel has used different capacity definitions in disclosures (about 240-250 MW in annual-report materials and about 120-130 MW of power in management commentary), so they are not reconciled here. Company target Nxtra to 1 GW in the next few years; about 25% share.

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+18%	+36%	44x	14%/yr

Sterlite Technologies STLTECH

OPTICAL CONNECTIVITY · CORE

A \$1.11 bn (Rs 10,000+ cr) Product Award Letter for AI data-centre connectivity in the US. Potential value is estimated at prevailing prices and purchase orders are released periodically. Data centres were 21% of June-quarter revenue versus 1% in FY26. The award supports US AI data-centre build-outs; recognition depends on purchase-order releases.

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+87%	+7%	751x	193%/yr

HFCL HFCL

DC CONNECTIVITY · CORE

A Rs 495.8 cr export order for data-centre connectivity and a Rs 215 cr dedicated connectivity plant approved.

Company target Data-centre revenue about Rs 800 cr in FY27, with more than Rs 850 cr of orders in hand.

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+120%	-15%	106x	52%/yr

Larsen & Toubro LT

AI FACTORY / CLOUD · CORE

Its Vyoma arm won a "Mega" order (L&T's Rs 10,000-15,000 cr band) to host a 10,000-GPU NVIDIA B300 AI factory at its Chennai data centre. Vyoma had 26 MW operating (2 MW Panvel and 24 MW commissioned at Chennai), with another 6 MW at Chennai in advanced commissioning. Mahape capacity has been described as 30-40 MW, so no single under-development MW figure is used here.

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+7%	+4%	33x	3%/yr

Anant Raj ANANTRAJ

DC DEVELOPER · CORE / EXECUTION

FY26 data-centre and cloud revenue was Rs 176.49 cr, about 7% of consolidated revenue. A separate demerger filing shows Rs 145.90 cr of data-centre turnover against a Rs 1,627.72 cr undertaking base (about 9%). On 8 August 2026 the board approved a scheme to demerge the data-centre and cloud business. Company target 63 MW by end-FY27; 117 MW by FY28; 357 MW by FY32.

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+7%	-23%	39x	9%/yr

Company notes, continued

ABB India ABB

SWITCHGEAR · CORE

Data centres were "almost 15% to 17%" of April–June 2026 orders, across switchgear, ring main units, e-houses and UPS.

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+21%	+7%	95x	47%/yr

Diamond Power Infrastructure DIACABS

DC CABLING · CORE

A ₹435 cr data-centre order book, 11.8% of ₹3,688 cr, plus a letter of intent for a Hyderabad data-centre campus.

Company target Data-centre sales about Rs 750 cr before March 2027.

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+129%	–8%	139x	67%/yr

Sansera Engineering SANSERA

SEMICAP COMPONENTS · CORE

A semiconductor-equipment order worth about Rs 1,250 cr over five years. Management said significant revenue from this award begins in CY2027 and peaks in 2029; "regular production has begun" refers to earlier semiconductor-equipment work, not this award.

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+33%	–4%	82x	40%/yr

Craftsman Automation CRAFTSMAN

ENGINE COMPONENTS · EMERGING CORE

Management has described growing data-centre demand for stationary-engine components from its German foundry and customer engagements/orders in that market. The exact data-centre revenue share is not independently source-locked in this note.

Company target About \$100 mn of stationary-engine revenue (FY29-FY30; the date has moved between calls)

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+36%	–8%	76x	36%/yr

Schneider Electric Infrastructure SCHNEIDER

SWITCHGEAR · CORE

Data centres and semiconductors together are more than a fifth of a ₹2,169 cr order bank, including an order from a leading semiconductor manufacturer.

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+5%	+4%	137x	66%/yr

CleanMax CLEANMAX

DC RENEWABLE POWER · CORE / HIGH RISK

Data & AI customers are 42% of contracted capacity, over 2.5 GW. This note does not split that total between direct data-centre load and emissions-offset arrangements because the exact primary-source breakdown is not source-locked here. Customers include Amazon, Google and Meta.

Company target At least 1.5 GW of new capacity commissioned in FY27

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+107%	–210%	159x	74%/yr

MTAR Technologies MTARTECH

DC ASSEMBLIES · EMERGING CORE

Rs 80.6 cr of data-centre orders across an April Rs 35.56 cr tranche and a Q1 Rs 45 cr tranche; both are tied to SLB. Management later described the current data-centre order as about Rs 45 cr, so AGI treats the Rs 80.6 cr total as needing tranche-level reconciliation.

Company target Data-centre revenue potential of Rs 400-500 cr 'over the next couple of years'

REVENUE Y/Y	FCF / SALES	P/E FY26	PRICE NEEDS
+130%	+7%	236x	99%/yr

The watch list

Members with filed AI or data-centre evidence that do not yet disclose enough to pass the materiality test. Each moves into the basket on the disclosure that closes the gap.

Company	Layer	Market value	P/E	Why not yet in the basket
Reliance Industries RELIANCE	AI DC / power	₹16.6 lakh cr	21x	A 168 MW AI data centre for Meta is contracted, but its revenue or EBITDA contribution is not disclosed.
Adani Enterprises ADANIENT	DC (AdaniConneX)	₹4.1 lakh cr	254x	65.4 MW operates against 960+ MW tied up, and the 400 MW Vizag order is part of the Google contract (CFO, Q1 FY27 call). But AdaniConneX is a 50:50, equity-accounted JV inside a diversified parent, so capacity alone does not establish materiality; AGI's base case puts it at about 4% of FY26 EBITDA by FY29.
Hitachi Energy India POWERINDIA	Transformers / grid	₹1.5 lakh cr	148x	Data centres were the major segment contributor to Q4 FY26 orders; value and share not disclosed.
GE Vernova T&D India GVT&D	Grid equipment	Rs 1.1 lakh cr	91x	Direct data-centre equipment exposure: 220 kV GIS bays commissioned at Hinjewadi for MSETCL / Nxtra Pune and a 220 kV GIS order for a substation powering a Mumbai data centre; value and share not disclosed.
Polycab India POLYCAB	Cables	Rs 1.3 lakh cr	47x	Cables supplied to named data-centre projects establish exposure. Management estimates industry cable content at about Rs 3.5 cr per MW, but Polycab-specific revenue and order value are not disclosed.
Tata Power TATAPOWER	Power / grid	₹1.2 lakh cr	32x	One 25-year renewable power agreement for Princeton Digital Group's Mumbai data centre, supplying since June 2023; capacity and value not disclosed.
CG Power CGPOWER	Chip packaging (OSAT)	₹1.4 lakh cr	116x	The audited ₹502.8 cr FY26 semiconductor segment is largely Axiro RF (radio-frequency and SATCOM chip design), not AI/data-centre revenue. Its OSAT plant began commercial production only in July 2026; AI/data-centre revenue and customers are not disclosed.

P/E uses FY26 profit to owners.

Held candidates

Not yet admitted: the evidence does not yet pass the evidence test. Not priced by AGI.

Company	Layer	Market value	P/E	What admission needs
KEC International KEC	Transmission	not priced	—	A first transmission-line order to evacuate power to a data centre, but its value is not split out of a ₹1,180 cr batch, so it does not meet the contractor rule; the MD also said the civil business has no data-centre order yet.
NTPC Green Energy NTPCGREEN	Renewable power	not priced	—	MoUs with Nxtra (up to 500 MW) and CtrlS (up to 2 GW). MoUs do not pass the evidence test; a signed power purchase agreement would.

Risks

Expectations

The median basket price needs about 47% profit growth a year to FY29; 8 of 15 need more than 40%. A delay in hyperscaler spending or order conversion would meet prices with little room for it.

Customer concentration

Several cases rest on one award or a few customers: STL's single hyperscaler award, Sansera's one large order, HFCL's export order. Customers are often unnamed.

Execution and timing

Data-centre capacity takes years to commission: AdaniConneX operates 65.4 MW of 960+ MW tied up, and L&T has not disclosed the tenure or start date of its Together AI order.

Liquidity

Under AGI's liquidity rule (20% of normal daily turnover over three days), several smaller members support positions well under Rs 100 cr.

Funding

7 of 15 had negative free cash flow in FY26. Capacity businesses (CleanMax, Anant Raj, Adani Enterprises) depend on continued access to capital.

Disclosure

No basket member reports its AI business as an audited segment; all rely on figures management states on calls and in presentations, which can be revised or stop being given. CG Power shows the trap: an audited semiconductor segment that is not AI revenue.

Estimates

Craftsman and MTAR pass the materiality test only on AGI's FY29 estimate, and every FY29 figure rests on stated assumptions. Estimates are shown as ranges in the India AI Monitor.

Data

Financial metrics use filings through the June 2026 quarter. Orders, qualitative evidence and company events are updated through 19 September 2026. Prices are 18 September closes from AGI's market data feed; share counts use the latest exchange shareholding or allotment filing available through that date.

Methodology and disclosures

Data and methods

Universe: 50 listed Indian companies read by AGI; 29 admitted on evidence in their own filings; 15 pass the materiality test described on page 3; 7 members are on the watch list, 2 candidates are held, and 7 other admitted members are tracked in the India AI Monitor but not covered here. Company figures come from annual reports, audited and quarterly results, exchange filings, investor presentations and earnings-call transcripts, read by AGI; each figure's document is held in the India AI Monitor.

Market value is the 18 September 2026 close times the latest shares outstanding available from exchange shareholding or allotment filings through that date. P/E uses FY26 consolidated profit attributable to owners. Free cash flow is operating cash flow less capital expenditure, including intangibles.

Growth the price needs is the annual profit growth at which market value equals 30 times profit in FY29. FY29 AI/DC materiality is AGI's base-case scenario, not a forecast of total earnings and not company guidance. No broker research, consensus estimate or third-party rating is used.

Basket status

'Core' and 'Emerging core' describe membership of AGI's thematic basket under the rules above; 'Emerging core' marks a company that passes only on AGI's estimate. They are classifications, not ratings or price targets, and do not take account of any reader's objectives, financial situation or needs.
